

ADVANCED MANUFACTURING & COMPONENTS DIVISION

3D PRINTING • LASER CUTTING • LASER WELDING • LASER MARKING • DESIGN • REVERSE ENGINEERING
• FABRICATION • MACHINING

From concept to component — engineered, manufactured, and delivered.

1. ABOUT CRECER GRANDE

Creceer Grande is an engineering and industrial services venture focused on helping manufacturing and engineering businesses improve machine uptime, source industrial components, manage engineering work and strengthen business documentation. We combine engineering capability, an on-demand technical network and practical manufacturing support to provide flexible solutions without the overhead of a large permanent organisation.

2. ABOUT THE DIVISION

Creceer Grande – Advanced Manufacturing & Components provides engineering and manufacturing solutions for industrial and engineering businesses.

We support customers from the initial concept, sketch or existing component through design, reverse engineering, process selection, manufacturing, finishing, inspection, and supply.

Our flexible manufacturing network enables us to provide access to multiple technologies without limiting customers to a single manufacturing process or facility.

Whether it is a one-off prototype, a small batch, a replacement component, an urgent machine spare or a repeat production requirement, Creceer Grande can coordinate the complete requirement through a single point of contact.

3. OUR CAPABILITIES

Additive Manufacturing

3D Printing & Rapid Prototyping

- Functional prototypes
- Concept models
- Low-volume components
- Custom brackets and housings
- Fixtures and tooling aids
- Resin 3D printing
- FDM/FFF 3D printing
- Prototype development
- Design validation models

3D printing allows customers to validate form, fit and design concepts before committing to conventional manufacturing.

Laser Cutting

Precision Cutting for Sheet & Plate Components

- MS
- SS
- Aluminium
- Sheet metal components
- Plates and brackets
- Machine guards
- Enclosures
- Mounting plates
- Custom profiles
- Prototype and batch production

Laser cutting can be combined with bending, welding, and machining to manufacture complete assemblies.

Laser Welding

Precision Joining for Industrial Components

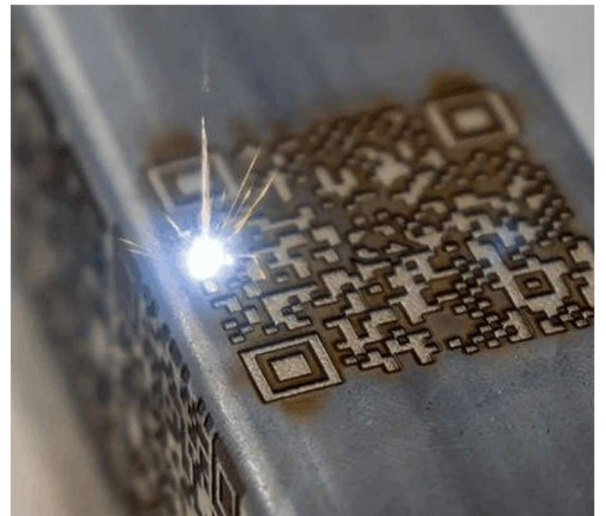

- Sheet metal assemblies
- Stainless-steel components
- Thin-section components
- Precision fabrication
- Repair and modification work
- Low-distortion welding applications
- Custom industrial assemblies
- Laser welding is particularly useful where controlled heat input, appearance and dimensional accuracy are important.

Laser Marking

Permanent Industrial Identification

- Serial numbers
- Part numbers
- QR codes
- Data Matrix codes
- Logos
- Product identification
- Traceability marking
- Machine and equipment identification
- Component marking

Marking can be provided on suitable metals and other compatible materials as per application requirements.

4. ENGINEERING & DESIGN

Design Support

We convert customer requirements into manufacturing-ready engineering information.

Our design support includes:

- 2D drafting
- 3D CAD modelling
- Manufacturing drawings
- Sheet-metal design
- Component design
- Assembly design
- BOM preparation
- Design modification
- Drawing corrections
- Design-for-manufacturing support

Customers can provide a **drawing, sketch, photograph, sample component or basic requirement**, depending on the project.

5. REVERSE ENGINEERING

From Existing Part to Replacement

When an original drawing is unavailable, discontinued, or outdated, Creceer Grande can develop a replacement component from the available physical part.

This is particularly useful for obsolete, damaged, or difficult-to-source machine components.

6. FABRICATION & MACHINING

Fabrication

- Sheet-metal fabrication
- Structural fabrication
- Machine frames
- Covers and guards
- Enclosures
- Brackets
- Mounting structures
- Welded assemblies
- Custom industrial assemblies

Machining

- CNC turning
- CNC milling
- VMC machining
- Conventional machining
- Bushes
- Shafts
- Spacers
- Collars
- Precision components
- Custom machine parts

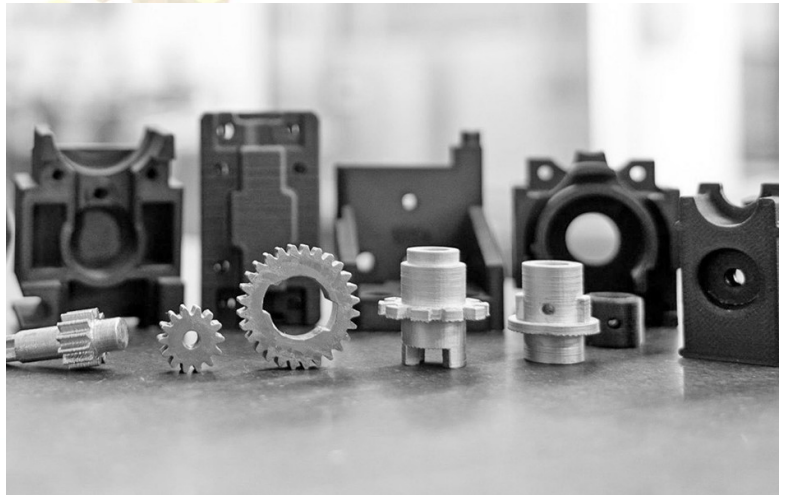

Where required, machining can be combined with laser cutting, bending, welding, and finishing to produce complete components or assemblies.

7. CUSTOM MACHINE SPARES

When the Original Spare Is Not Available

Creцер Grande specialises in developing and supplying custom and replacement machine components. Typical requirements include:

- Brackets
- Bushes
- Shafts
- Spacers
- Rollers
- Coupling components
- Machine guards
- Sensor mounting brackets
- Conveyor components
- Hydraulic and pneumatic components
- Fixture components
- Covers and plates
- Custom maintenance spares
- Obsolete machine parts

Our objective:

Reduce machine downtime by providing a practical engineering route to replacement components.

8. COMPLETE MANUFACTURING SOLUTION

Customers do not always need a single manufacturing process.

A component may require several processes before it is ready for use.

Creceer Grande can coordinate Design, Reverse Engineering, Laser Cutting, Bending, Machining, Welding, 3D Printing, Laser Marking, Surface Finishing, Inspection, Assembly & Supply.

This provides customers with a single-window manufacturing solution instead of coordinating multiple vendors.

9. WHAT YOU CAN SEND US

We can work with different levels of engineering information:

Engineering Drawing

Send us your 2D/3D drawing and specifications.

Sample Component

Send or provide access to the existing component for measurement and development.

Sketch

A hand sketch with dimensions can be used as the starting point for development.

Photograph

For initial feasibility assessment, photographs and available dimensions can be shared.

Requirement Only

Tell us what the component needs to do, and our engineering team can help determine a suitable manufacturing approach.

10. OUR VALUE PROPOSITION

DESIGN. MAKE. MARK. DELIVER.

Whether you need:

- One prototype
- Ten custom components
- A replacement machine spare
- A fabricated assembly
- A laser-marked part
- A reverse-engineered component
- Or a recurring production requirement

Creceer Grande can provide the engineering and manufacturing support required to take it from requirement to finished component.
